

Online Job Postings Occupational Job Functions

View a report of online job posting trends for each of the job functions listed below. A job function is a grouping of related occupations. These monthly reports contain the top occupations and employers advertised online through OhioMeansJobs.com. For each job function, learn the base salary, educational requirements, top certifications, and skills employers are seeking. A listing of the occupations within each job function is also available at [Related Occupations with Descriptions](#).

Select a job function below.

Administration/Clerical	Creative/Talent	Education/Training	Engineering/ Quality Assurance
Executive Management	Facilities/Construction	Finance/Accounting	Hospitality/Services
Human Resources	Information/Technology	Legal	Maintenance/Repair
Manufacturing/Resources	Marketing/Public Relations	Medical/Health	Operations/Logistics
Sales/Business Development	Science/R&D	Security	Social Services

The job function reports are created through data provided by TalentNeuron™. In addition to these reports, each month OhioMeansJobs.com provides reports on job postings trends for Ohio and the JobsOhio network regions. These reports are readily available for businesses, career service professionals and schools.

EDITOR'S NOTE: This report is based on data provided by TalentNeuron, a global research and advisory company. Through this partnership, new data sources and improved methodologies are available to better understand occupational demand over time. This reflects a change from the methodology used to produce these reports prior to October 2023.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.

August 2026

The chart displays the mid-monthly total volume over a four-year period. The y-axis represents the volume, ranging from 1000 to 4500 in increments of 500. The x-axis shows time in 6-month intervals from August 2022 to August 2026. The volume starts at approximately 3400 in August 2022, drops to a low of about 2000 in May 2023, then rises to a peak of 3500 in August 2024. It continues to fluctuate, reaching another high of about 3400 in January 2026, before ending at approximately 2750 in August 2026.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.

August 2026

The chart displays the mid-monthly total volume over a four-year period. The y-axis represents the volume, ranging from 2,500 to 27,500 in increments of 2,500. The x-axis shows time in six-month intervals from August 2022 to August 2026. The data points are connected by a red line with black diamond markers. The volume starts at approximately 21,000 in August 2022, peaks at 22,200 in November 2022, and then generally declines to a low of 7,000 in May 2026, before a slight recovery to 8,200 in August 2026.

Bakers	28

EDITOR'S NOTE: This report is based on data provided by TalentNeuron, a global research and advisory company. Through this partnership, new data sources and improved methodologies are available to better understand occupational demand over time. This reflects a change from the methodology used to produce these reports prior to October 2023.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.
