

Online Job Postings Occupational Job Functions

View a report of online job posting trends for each of the job functions listed below. A job function is a grouping of related occupations. These monthly reports contain the top occupations and employers advertised online through OhioMeansJobs.com. For each job function, learn the base salary, educational requirements, top certifications, and skills employers are seeking. A listing of the occupations within each job function is also available at [Related Occupations with Descriptions](#).

Select a job function below.

Administration/Clerical	Creative/Talent	Education/Training	Engineering/ Quality Assurance
Executive Management	Facilities/Construction	Finance/Accounting	Hospitality/Services
Human Resources	Information/Technology	Legal	Maintenance/Repair
Manufacturing/Resources	Marketing/Public Relations	Medical/Health	Operations/Logistics
Sales/Business Development	Science/R&D	Security	Social Services

The job function reports are created through data provided by TalentNeuron™. In addition to these reports, each month OhioMeansJobs.com provides reports on job postings trends for Ohio and the JobsOhio network regions. These reports are readily available for businesses, career service professionals and schools.

EDITOR'S NOTE: This report is based on data provided by TalentNeuron, a global research and advisory company. Through this partnership, new data sources and improved methodologies are available to better understand occupational demand over time. This reflects a change from the methodology used to produce these reports prior to October 2023.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.

June 2026

The chart displays the mid-monthly total volume over a four-year period. The y-axis represents the volume, ranging from 1000 to 4500 in increments of 500. The x-axis shows time from June 2022 to June 2026, with major ticks every six months. The data is represented by a dark red line with black diamond markers. The volume starts at approximately 3300 in June 2022, peaks at 3400 in September 2022, and then generally declines to a low of about 1950 in March 2023. It then fluctuates between 2000 and 3000 until early 2024, when it reaches a significant peak of 3500. Following this peak, the volume fluctuates between 2800 and 3400 through 2025, ending at approximately 2850 in June 2026.

This reflects a change from the methodology used to produce these reports prior to October 2023.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.

June 2026

The chart displays the Mid-Monthly Total Volume (4Yr) over a four-year period from June 2022 to June 2026. The y-axis represents the volume, ranging from 500 to 5000 in increments of 500. The x-axis shows time in six-month intervals. The volume starts at approximately 3500 in June 2022, remains relatively stable until December 2022, then begins a downward trend. It reaches a low of about 1500 in June 2023, followed by a recovery to around 2200 in December 2023. The volume continues to fluctuate, with a notable peak of approximately 2200 in June 2025, and ends at about 1700 in June 2026.

Date	Mid-Monthly Total Volume (4Yr)
June 2022	3500
December 2022	3500
June 2023	1500
December 2023	2200
June 2024	2200
December 2024	2000
June 2025	2200
December 2025	1900
June 2026	1700

June 2026

The chart displays the mid-monthly total volume over a four-year period. The y-axis represents volume, ranging from 2,500 to 27,500 in increments of 2,500. The x-axis shows time from June 2022 to June 2026, with labels every six months. The data points are connected by a red line with black diamond markers. The volume starts at approximately 22,000 in June 2022, rises to a peak of 22,500 in October 2022, and then shows a significant downward trend, reaching a low of about 7,500 in June 2026. There is a notable recovery in early 2024, peaking at 14,000 in February 2024, before declining again.

EDITOR'S NOTE: This report is based on data provided by TalentNeuron, a global research and advisory company. Through this partnership, new data sources and improved methodologies are available to better understand occupational demand over time. This reflects a change from the methodology used to produce these reports prior to October 2023.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

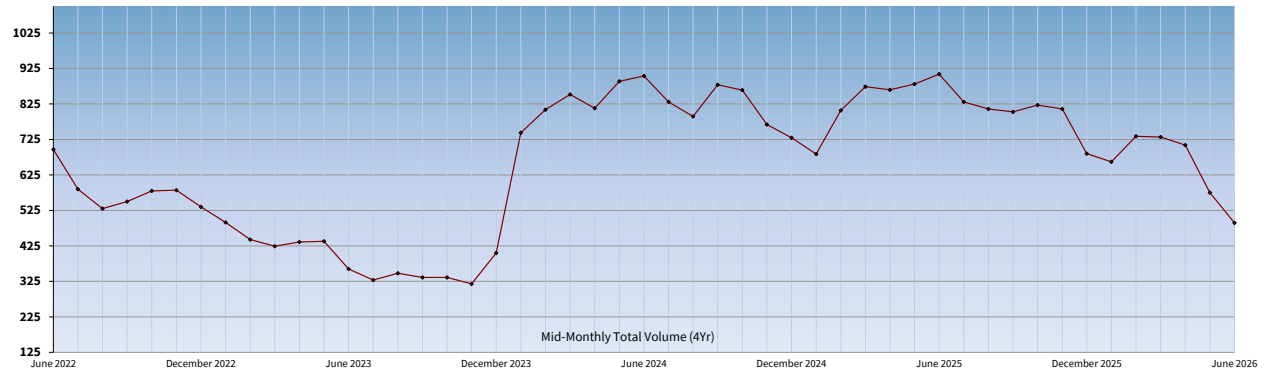

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.

June 2026

The chart displays the mid-monthly total volume over a four-year period. The y-axis represents the volume, ranging from 0 to 7000 in increments of 1000. The x-axis shows time from June 2022 to June 2026, with major ticks every six months. The data points are connected by a dark red line, showing a clear downward trend with seasonal fluctuations. The volume starts at 5000 in June 2022, reaches a local peak of 5000 in November 2022, and then drops to approximately 1700 by June 2026.

Date	Mid-Monthly Total Volume (4Yr)
June 2022	5000

Military Enlist'd Tacticl Ops & Air/Weapons Specialists & Crew Membrs, All Oths.	1

EDITOR'S NOTE: This report is based on data provided by TalentNeuron, a global research and advisory company. Through this partnership, new data sources and improved methodologies are available to better understand occupational demand over time. This reflects a change from the methodology used to produce these reports prior to October 2023.

This information is a snapshot in time and may not represent long-term trends. Any of this data, including historical reports, may vary slightly over time, as minor revisions are continually made to this live database. Some ads may appear in two or more occupation codes and may be counted more than once. This information should be used in conjunction with local labor market information to analyze current occupational demand.

This data has not been seasonally adjusted. Sometimes seasonal adjustment is used to remove fluctuations in unemployment and labor force trends that normally occur with changes in the season. Seasonal variation in employment occurs for natural and institutional reasons, including reduced employment involving outdoor activities during winter, changes in labor force and unemployment levels with opening and closing of schools, and layoffs during the automobile model changeover period. Seasonal variations can also affect the number of online job ads, so over the year it will affect the data in this report.
